

RETRO FIT-OUT SYSTEM CONTROL CHANGE

SMW Drilling Services together with DDA have completed a control system change on a D75KS Blast Hole Drill.

We were engaged to improve the reliability and utilisation of the current system.

We designed a console with product and operator improvements to functionality, fitting into the existing cabin. Our new retro fit-out ensures easy maintenance together with ongoing parts availability.

Parker Iqan modules were programmed and installed to operate the drilling functions to the highest level, and with equal response time to give the operator feel for the ground conditions and the ease of rod changes.

All relays and modules were fitted on a back board behind the console, ensuring that all troubleshooting is in the one location.

DDA used Hydronym Schematic Drawing Software to design the full machine electrical schematic.
